Shane C.
COO at INTOPROFITS

Dear Hiring Manager,

I am applying for JavaScript Developer at your firm. I completed my IT Engineering graduation in 2017 and since then I have worked as a Fullstack Developer at multiple Product based companies ranging from midsize to large-scale MNCs.

I liked the Job Description for the given role, and it felt more of using modern technology stack and tools. Looking at the given Job description for this JavaScript Developer role, I seem to find pretty matching with my current role profile and looks similar. It is one of the reasons for me applying to this role as it is more relevant.

I have experience in designing Databases for large scale applications without any scalability or slow-down issues. I do mainly have experience on different services available on AWS Cloud like API Setup, Virtual Machine Configuration, NoSQL, Event driven architecture and Serverless Architecture of applications as well as running applications at low-cost & in optimized manner. I have been into Vue.js frontend framework for now, and can code in React with Next JS server side rendering pages as well in 1 week of learning. I have been into Fullstack Development for a long time, ie 3.5year plus and so it's easy for me to look towards Frontend, Backend, DevOPs, App Security as well. Delivering work at time and with maintained quality standards has always been my extreme focus.

Please take a moment to review my resume at <https://ayzom.com/resume> . I believe I can put my skills and strengths to good use benefiting both of us. I look forward to hearing from you.

Sincerely,

Akhilesh.Yadav
